  pub producer : AccountHash,
  pub publisher : AccountHash,
}
```

## Functionalities (EntryPoints)

```
mint ( metadata String amount U64 recipient Key price U256 ): U64
```

Mints the 'amount' of tokens with given 'metadata' and 'price' into 'recipient' account. prices are in USD!

```
publish_request ( producer-account Key amount U64 holder_id U64 comission U8 ): U64
```

Sends an publish\_request, from a publisher (who calls this function) to a producer ('producer\_account'), it aims a holder with 'holder\_id' with a specific 'comission'

```
cancel_request ( request_id U64 ): Unit
```

Cancels the request that was sent by a publisher, which's request\_id is equal to passed 'request\_id'. Only the publisher can run this.

```
approve ( request_id U64 ): U64
```

Approves the request with given 'request\_id'. Only the producer of that product can run this function.

```
disapprove ( amount U64 approved_id U64 publisher-account Key ): Unit
```

Return back, the 'amount' from a 'approved\_nft', from 'publisher's' account. this can be called only from the producer account.

```
buy ( amount U64 purse_addr Key approved_id U64 current_price_timestamp String signature String ): Unit
```

Buy 'amount' of tokens from a 'approved\_nft' with 'approved\_id' into your account, provided the purse\_address which contains CSPR tokens, and a current price of CSPR along with timestamp, signed by droplinked's private key.
